

It is important for the Fixed-Price project to define all stakeholders and identify decision-makers, those who will accept the project outcome, and those who can provide business/technical insights. As part of the stakeholders identification stage it is crucial to set up expectations around the stakeholder's required involvement vs. availability level. Identified stakeholders should be represented on the power/interest matrix. Previously prepared stakeholder registers documentation could be used from completed EPAM projects.

Stakeholders Register should contain:

- stakeholder type (person, group)
- stakeholder name
- stakeholder company
- stakeholder position
- project role (if applicable)
- expectations from the project results
- level of power (low/high)
- level of interest (low/high)

Useful Information

 Tabs Container | direction = horizontal

 Tabs Page | title = Build power & interest matrix

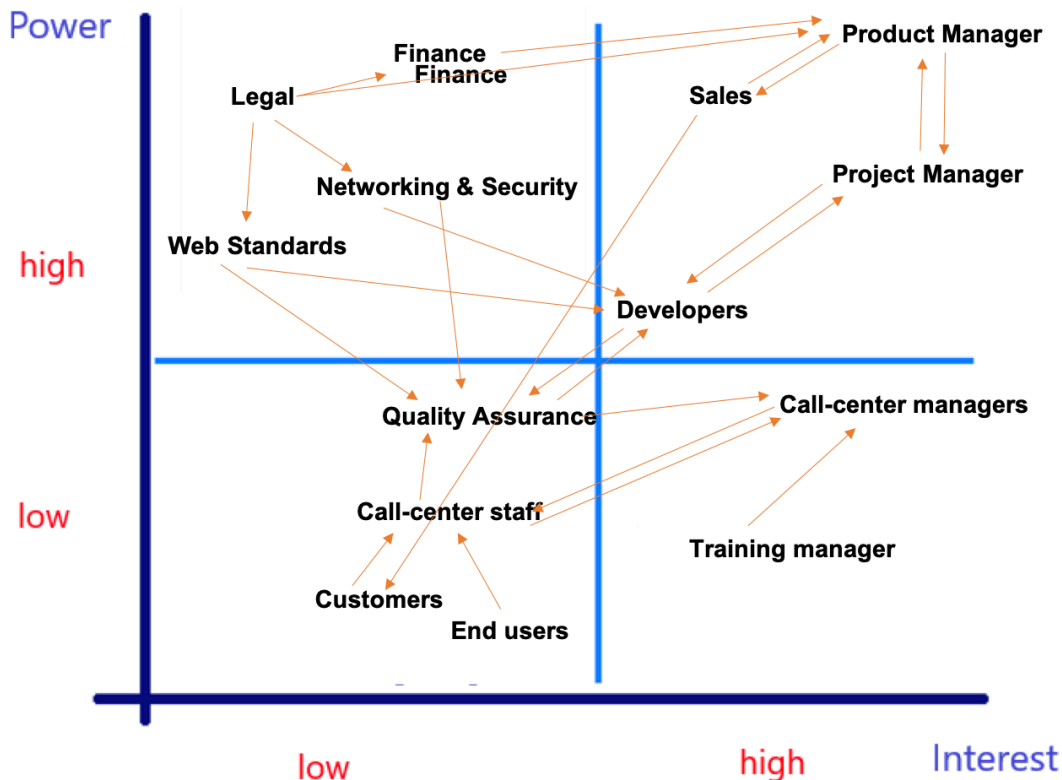

Select the right strategy to work with stakeholders. It is a simple tool that helps you categorize project stakeholders with increasing **power** and **interest** in the project. This tool helps you focus on the key stakeholders who can make or break your project

Power high	 counseling / satisfy	 max involvement / management	
low	 watch / ignoring	 getting support / keep in touch	
	low	high	Interest

 Tabs Page | title = Draw influence lines

 Info

Influence lines will change as time passes, since different project phases in the lifecycle increase the interest and/or power of certain stakeholders.

Drawing Influence Lines allows one to identify stakeholders within a particular quadrant that need special attention.

In this particular example, the Training Manager role has only one connection to the Call-center managers which makes us wonder guessing where the Training Manager gets information. Make sure you understand who are the key decision makers are and what information must shared with each group of stakeholders.

Tabs Page | title = Stakeholder analysis questions

Questions for assessing stakeholder importance/legitimacy:

- How much influence does the stakeholder have?
- Is the stakeholder more or less influential in certain areas/capacities?
- Do they have legal rights?
- How could they hinder the project?
- Have we come across the stakeholder before?
- What is their involvement/status?
- What responsibilities do we have to this stakeholder?
- What are the stakeholders' stakes?

Questions for stakeholder motivation:

- What are the stakeholder's expectations?
- What exactly is the stakeholder's interest?
- What are they interested in?
- What are they expecting to gain?
- What are their concerns?

Questions to help develop a stakeholder engagement strategy:

- What do they need?
- What would be quick wins for this stakeholder?
- What are their long term issues/concerns?
- What actions could we take to address the stakeholders concerns?
- What would be a win/win outcome for us/our business/project and this stakeholder?

Tabs Page | title = Interviewing the candidates

- When interviewing the candidates do not rely on engineering levels only, try to get information about their qualification, performance, previous experience and attitude based on their previous experience, and attitude based on their previous projects. You should ask for performance feedback from the candidate's PM/DM/Team lead on the previous project. This can be done either directly or via RM to get a consolidated summary. Keep in mind that RMs tend to 'sell' positive traits of their subordinates, whereas DM's opinion would be most up-to-date and unbiased.
